EDUCATION

Dayananda Sagar College of Engineering – Bengaluru, Karnataka

CGPA: 8.99

Bachelor of Engineering – Computer Science and Engineering (Cybersecurity)

2023 – 2027

EXPERIENCE

Full Stack Developer Intern

June 2026 – Present

Tenjiku Innovations Pvt. Ltd. (Minato)

Bengaluru, India

- Working on a **multi-role PG rental platform** with React Native/Expo mobile apps and a Node.js/Express/TypeScript/Prisma/PostgreSQL backend serving customers, owners, field agents, and admins.
- Built the **Residents management page** in the React/Ant Design admin console with role-based filtering and a detail drawer showing property, room, and login history.
- Traced and fixed a **React Query AsyncStorage cache persistence bug** that caused one owner's property data to appear in another owner's session after rate limiting.
- Added several fields to the User schema via **Prisma migration** to track resident app login activity.
- Navigated a **GitLab monorepo** with **5+ microservices** independently, diagnosed issues, and raised structured bug reports within the first week of joining.

TECHNICAL SKILLS

Languages: Java, Python, C, TypeScript, JavaScript

Security Tools: Wireshark, Burp Suite, John the Ripper, SQLMap, Hashcat, Ghidra, VirusTotal

Technologies / Frameworks: Node.js, Express.js, React, React Native, PostgreSQL, Prisma, Docker, REST APIs

Developer Tools: Git, GitHub, GitLab, Linux, Postman, Expo

PROJECTS

SentinelPipe | *Python, FastAPI, Docker, Ghidra* | [GitHub](#)

- Built a **multi-stage security analysis pipeline** using FastAPI microservices, with an LLM-based orchestrator that routes files across **5 specialized analyzers** – malware, recon, steganography, web, and macro.
- Integrated Ghidra for binary disassembly and wrote adapter layers to normalize outputs from different tools into a unified report format with risk scores.
- Containerized all services with **Docker Compose** for isolated, reproducible execution; deployed on AWS EC2 with Nginx reverse proxy for demo purposes.
- Designed a rule-based fallback mechanism so the pipeline remains functional even when the LLM orchestrator is unavailable.

EtherLink | *C, Python, TAP Interfaces, UDP, Linux Networking* | [GitHub](#)

- Built a **custom Layer 2 VPN** in C and Python using TAP devices and raw sockets to tunnel Ethernet frames over UDP across the internet.
- Implemented **MAC address learning** and frame forwarding on a virtual switch, enabling distributed devices to communicate as a single LAN.
- Tested across Fedora and Kali KVM environments; handled **NAT traversal** using Playit.gg and resolved firewall port blocking issues.
- Documented the architecture and set up a KVM-based test environment to simulate real-world multi-node network conditions.

DevAssist | *React, Node.js, MongoDB, Socket.io, Redis, Groq, WebContainer API* | [GitHub](#)

- Built a **real-time collaborative coding platform** with a browser-based editor powered by WebContainer API for in-browser code execution without a backend sandbox.
- Used **Socket.io** for live multi-user synchronization and **Redis** for caching frequently accessed session data.
- Integrated **Groq** for low-latency AI code suggestions and implemented JWT-based authentication with protected APIs.
- Designed the backend with an **Express + MongoDB** stack, optimizing query patterns to reduce response times for collaborative sessions.

ACHIEVEMENTS

- Ranked **Top 10** at **Sandbox v2.0** – National 24-hour Cybersecurity Hackathon, DSCE, March 2026
- Secured **2nd Place** in **Aegis Internal CTF**, DSCE
- Ranked **Top 10** at **Code Kalari** – National Hackathon, **IIIT Kottayam**
